

Search the Internet by Talking to Your PC

Free software download enables Internet users to make local, video, photo, stock market, wiki, universal or social networking website searches by talking to their PC

CINCINNATI, OHIO June 20, 2007 Voice Tech Group, Inc., today announced the immediate availability of **tazti**[™] (pronounced tasty) in beta version. **tazti** software is a free download that combines speech recognition technology with local search/universal search engine technology, internet/web navigation, and PC OS control technology, all in a very easy to use PC/Web 2.0 style application. Voice Tech Group, Inc., also announces a worldwide co-marketing agreement with Intel Corporation to promote **tazti** speech recognition search technology.

Available now from <http://www.tazti.com>, **tazti** is a powerful search and retrieval companion to web browsers such as Internet Explorer and Firefox. **tazti** enables users to speak to their PCs and make searches through their favorite search engines.

tazti allows users to speak their searches rather than type them in through the keyboard. **tazti** works with many popular search engines and websites with search capability including You Tube, Flickr, MySpace, Google, Yahoo!, MSN, Wikipedia, ASK, About, Amazon, AOL Video, ebay and even a stock market search site as well as others.

"tazti beta is a great product that allows users to make effective Internet searches by speaking to their PC. And for notebook, Internet mobile device and Ultra Mobile PC users, the local search capability lets the users finally make speech searches for whatever they want by zip code wherever there is connectivity." said Jason Powell, Innovation Accelerator Manger in the Software Solutions Group of Intel Corporation who has been working closely with Voice Tech Group, Inc., mentoring and advising them as needed on marketing and engineering issues. Additionally he said. "These guys have additional hot new products lined up for release behind their beta, that we expect to reach a huge mass market."

tazti features include:

1. Publisher agnostic speech recognition search & local search of popular search engines.
2. Publisher agnostic speech recognition search of popular video, photo and social networking sites.
3. Publisher agnostic speech recognition search of popular shopping sites.
4. Check the share price of company stocks by speech recognition stock market searches.
5. User can open a favorite website simply by speaking pre-programmed speech commands, e.g. user says: "Go MySpace" then the PC will hyperlink to the My Space homepage.
6. Users can customize **tazti** by adding their own speech commands and associated hyperlinks.
7. Command of Operating System including speech commands such as "click" and "double click" which eliminate the need to click the mouse. Also "Calculator," "Control Panel," "Windows Explorer," etc.
8. Users can assign a webcam to open when speaking the speech command "Go Webcam."
9. Speaking speech commands can bring up coupons for free samples of an advertisers product.
10. A revolutionary new advertising platform and revenue model where advertisers can rent a speech command and then associate the speech command to a hyperlink leading to their their website. We are now renting speech commands.

tazti is available in beta version, free, for users of Windows Vista, XP and XP Tablet.
